Week 1 and 2: Data Visualization Examples

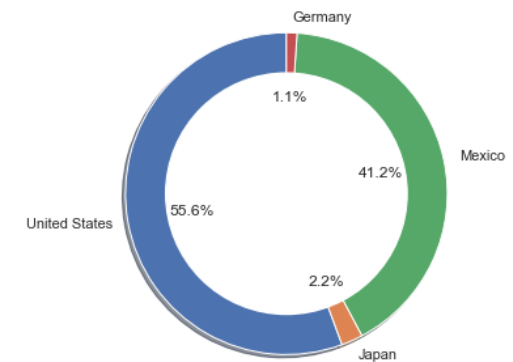

Key Learnings

- The Color Wheel online is better than what is in Python so far from viewing Matplotlib
- I may create my own color scheme but matching in Python was odd
- Titles on X and Y access
- Good Titles that speak for themselves
- Very much do not like pie charts now that I think Knaflitz (2015) just conditioned me to it.
- I'm not able to add the R Kernel in my work laptop from IT restrictions
- Doughnuts in Tableau require 2 pies that then synchronize and that was fun to do.

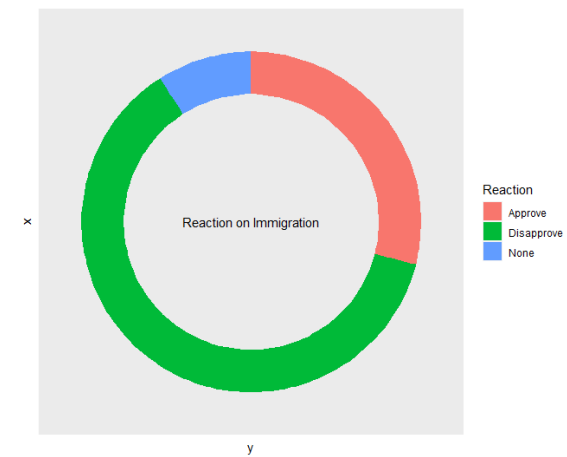

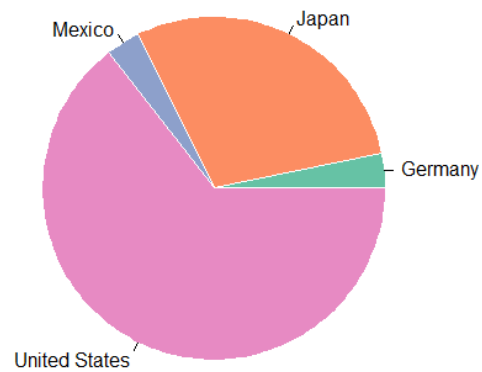

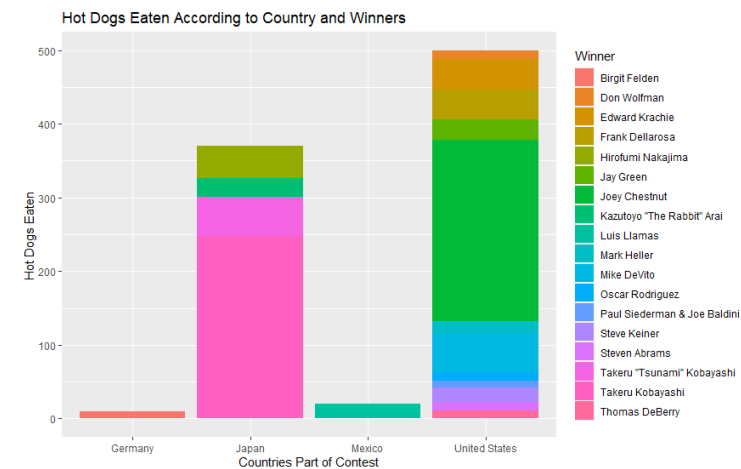

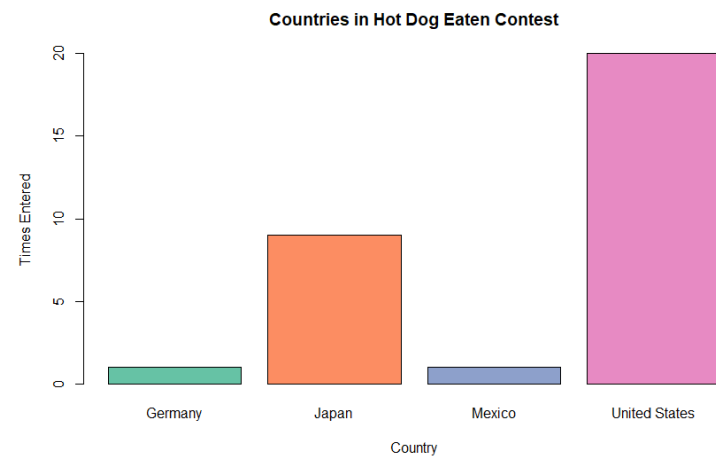

Python

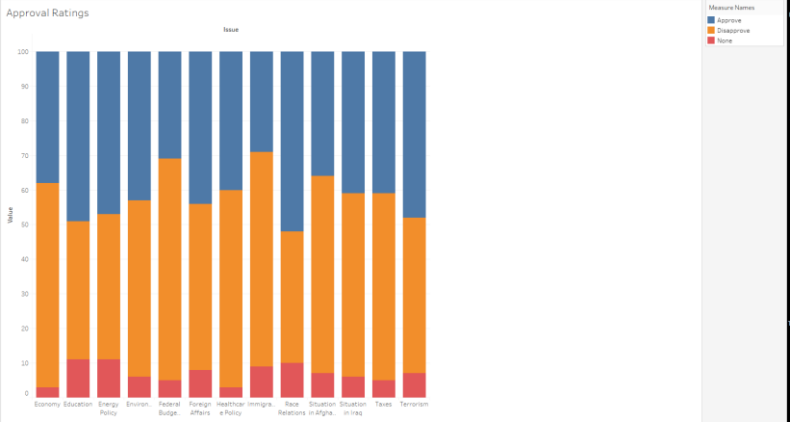

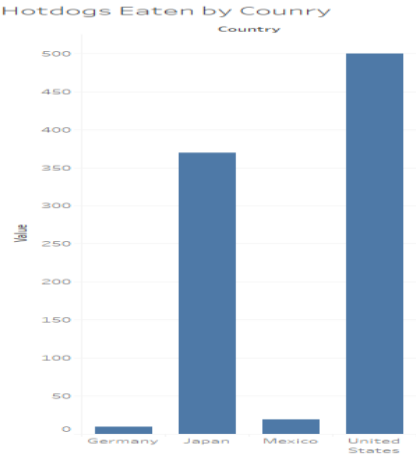

Hotdogs Eaten by Winning Countries (1980-2010)

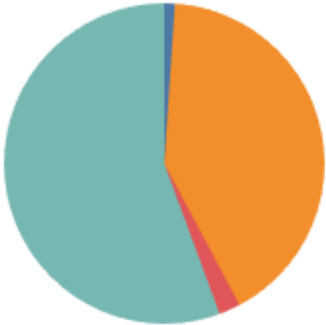

R

Tableau

Dogs Eaten by Country

Doughnut chart of countries participating
